

Java und VSCode unter Windows einrichten

Java

Lade dir OpenJDK von der Seite <https://jdk.java.net> herunter.

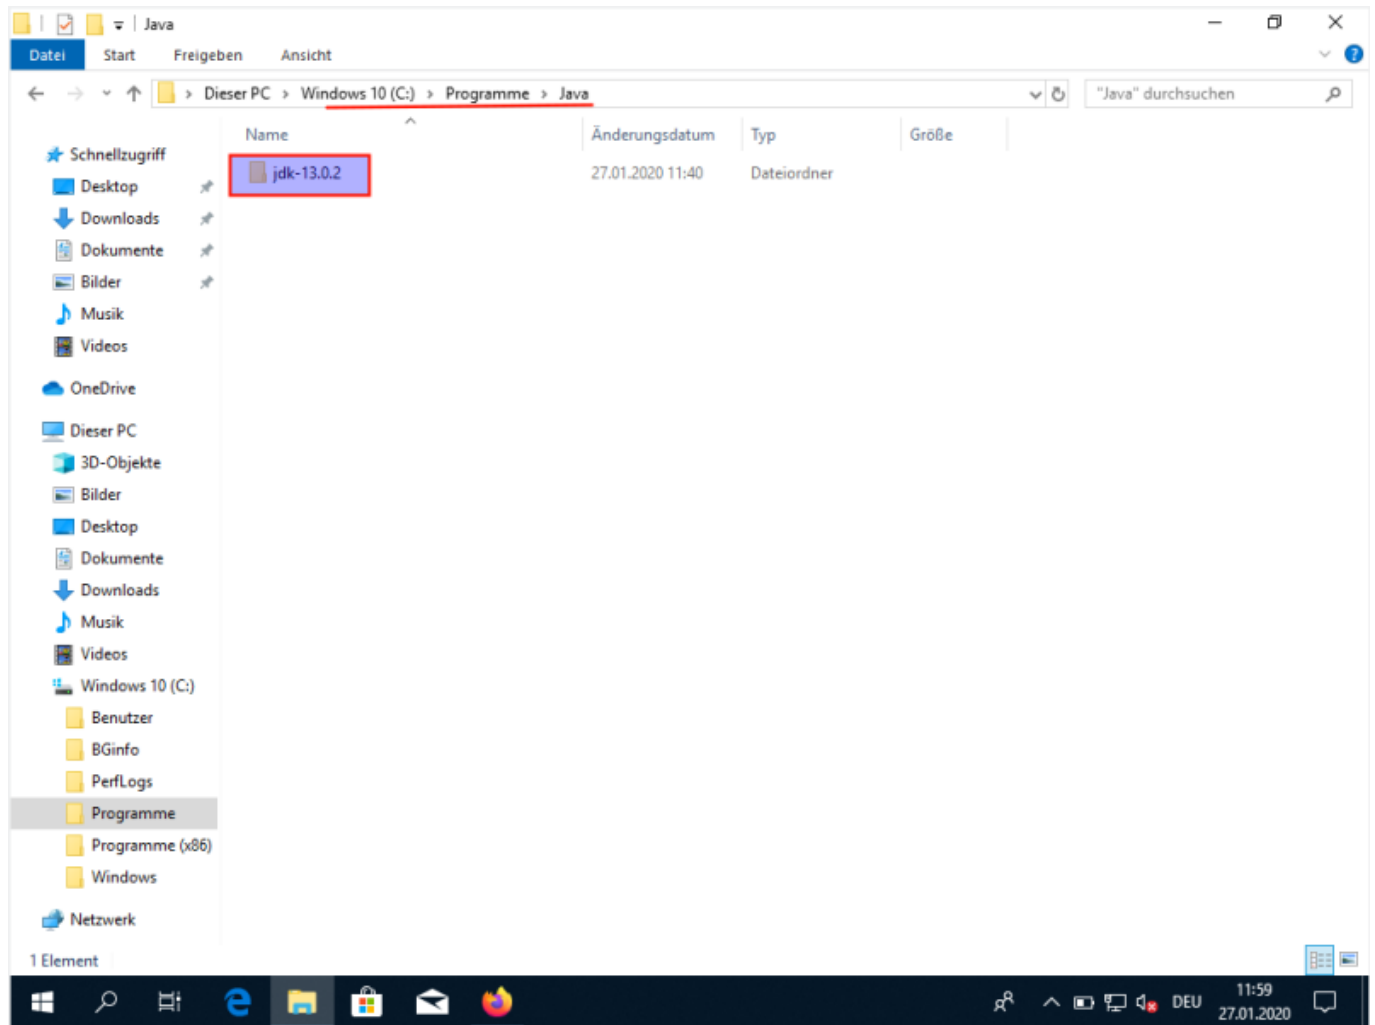

The screenshot shows the official Java Development Kit (JDK) 13.0.2 General-Availability Release page. The page is titled "JDK 13.0.2 General-Availability Release" and includes a sidebar with navigation links for GA Releases, Early-Access Releases, Reference Implementations, Feedback, and Archive. The main content area provides details about the release, including the schedule, status, and features. It also lists the documentation (Release notes and API Javadoc) and the build information for Build 8 (2019/12/11). The download links for Linux/x64, macOS/x64, and Windows/x64 are provided, with the Windows/x64 ZIP (sha256) link highlighted. The page also includes a section for Notes and a Feedback section.

Platform	Download Link	Size
Linux/x64	tar.gz (sha256)	195812001 bytes
macOS/x64	tar.gz (sha256)	189969691
Windows/x64	ZIP (sha256)	195969512

Entpacke die ZIP-Datei und verschiebe den Ordner openjdk-XX.x.x (die X stehen für die jeweilige Version) nach C:\Programme\Java. Den Ordner Java als Unterordner von C:\Programme" musst du evtl. noch erstellen. Dazu - und zum Verschieben - sind Administratorenrechte nötig.
